## Charter for Working Group

Automobiles and vehicles of all types are increasingly connected to the Internet. Comfort-enhancing entertainment applications, road safety applications using bidirectional data flows, and

# IPWAVE Working Group (2/2)

- IPWAVE (IP Wireless Access in Vehicular Networks) Working Group (WG)
  - IPWAVE WG aims at the standardization of IP-based networking such as Vehicle-to-Vehicle (V2V) and Vehicle-to-Infrastructure (V2I).
- The main deliverable documents are:
  - IPv6 over IEEE 802.11-OCB (Outside the Context of a Basic service set).
  - IPWAVE Problem Statement and Use Cases
- After the IPWAVE Problem Statement document is published, IPWAVE WG will work for rechartering to develop IPWAVE protocols such as
  - Vehicular Neighbor Discovery
  - Vehicular Mobility Management
  - Vehicular Security and Privacy

The screenshot shows a web browser window displaying the IETF Datatracker interface for the 'ipwave' working group. The title bar reads 'IP Wireless Access in Vehicular Environments (ipwave)'. The navigation menu includes 'Datatracker', 'Groups', 'Documents', 'Meetings', 'Other', and 'User', along with a 'Document search' bar. Below the menu, there is a navigation bar with links for 'About', 'Documents', 'Meetings', 'History', 'Photos', 'Email expansions', 'List archive »', and 'Tools »'. The main content area is titled 'Document' and lists two entries:

# **IPv6 over IEEE 802.11-OCB**

**(RFC 8691 - Basic Support for IPv6 Networks Operating Outside  
the Context of a Basic Service Set over IEEE Std 802.11)**

# IPv6 over IEEE 802.11-OCB (1/3)

- IPv6 over IEEE 802.11-OCB Document
  - Objective
    - It aims at the specification of IPv6 extension for delivering an IPv6 packet in V2V and V2I over IEEE 802.11-OCB link.
    - It provides methods and settings, and describes limitations for using IPv6 to communicate among nodes over a IEEE 802.11-OCB link with minimal change.
  - Document name
    - RFC 8691
  - Document link
    - <https://datatracker.ietf.org/doc/rfc8691/>
  - Document status
    - RFC - Proposed Standard

# IPv6 over IEEE 802.11-OCB (2/3)

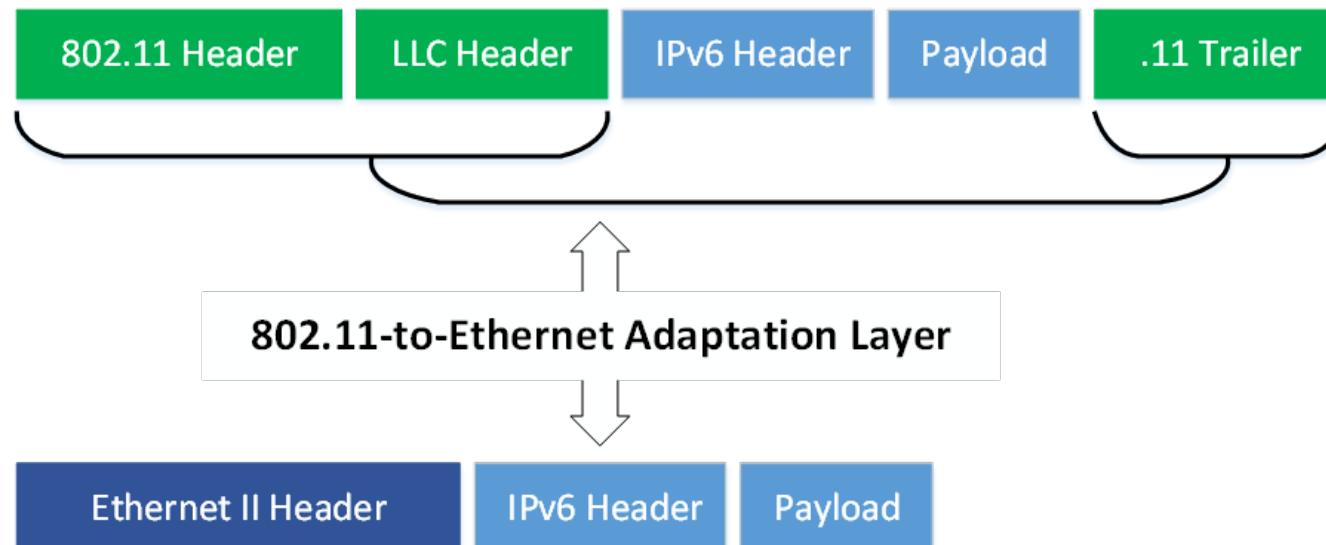

- Main Subjects of IPv6 over IEEE 802.11-OCB
  - Maximum Transmission Unit (MTU)
  - Frame Format
  - Link-Local Address
  - Stateless Autoconfiguration
  - Address Mapping
  - Subnet Structure
  - Security and Privacy Considerations

뉴 노멀 시대  
선도를 위한  
ICT 표준의  
역할

# IPv6 over IEEE 802.11-OCB (3/3)

- Frame Format

- IP packets must be transmitted as QoS Data frames over 802.11-OCB.
  - The QoS Data frame format is specified in IEEE 802.11 specification.
- The 802.11-OCB QoS Data Frame contains an 802.11 header + a Logical Link Control (LLC) header + IPv6 datagram.
  - The Type field in the LLC header must be set to 0x86DD (IPv6).
  - The mapping to the 802.11 data service must use a “priority” value of 1, which specifies the use of QoS with a “Background” user priority.

# **IPv6 Wireless Access in Vehicular Environments (IPWAVE): Problem Statement and Use Cases (draft-ietf-ipwave-vehicular-networking-19)**

Jaehoon Paul Jeong  
(Editor)

# IPWAVE Problem Statement Draft

- IPWAVE Problem Statement and Use Cases Document
  - Objective
    - It aims at the problem statement of IPWAVE along with possible use cases in V2V, V2I, and V2X using IEEE 802.11-OCB links.
    - It covers three subjects such as IPv6 Neighbor Discovery, IP Mobility Management, and Security & Privacy.
  - Document name
    - draft-ietf-ipwave-vehicular-networking-19
  - Document link
    - <https://datatracker.ietf.org/doc/draft-ietf-ipwave-vehicular-networking/>
  - Document status
    - Submitted to IESG

# IETF-108 Hackathon Project Poster

## IP Wireless Access in Vehicular Environments (IPWAVE) Basic Protocols

Champion: Jaehoon (Paul) Jeong (SKKU)

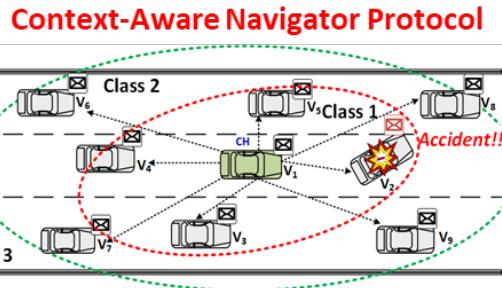

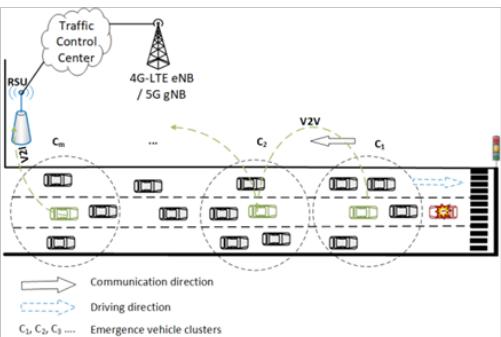

### Professor:

- Jaehoon Paul Jeong (SKKU)
- Younghan Kim (SSU)

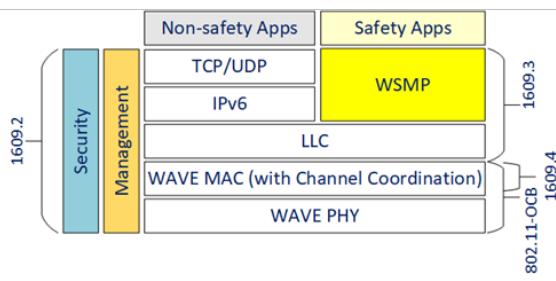

### Students:

- Bien Aime Mugabarigira (SKKU)
- Yiwen Chris Shen (SKKU)
- Ahn Yeoseop (SKKU)
- Kyoungjae Sun (SSU)

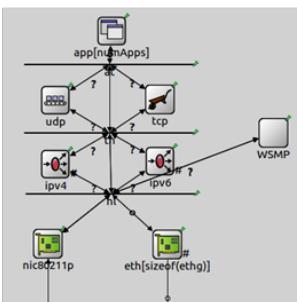

### Vehicular Network Architecture

### WAVE Protocol Stack

### Vehicle Structure in OMNeT++

### Objectives:

- Demonstrate IPWAVE Basic Protocols
- Discover technology gaps for IPWAVE

### Where to get source code:

- Git-hub open source:  
<https://github.com/ipwave-hackathon-ietf>

### How to set up an environment:

- OS: Ubuntu 16.04
- OMNeT++: 5.4.1
- SUMO: 0.32.0
- Veins: 4.7.1
- INET Framework: 4.0.0

### Implementation Contents:

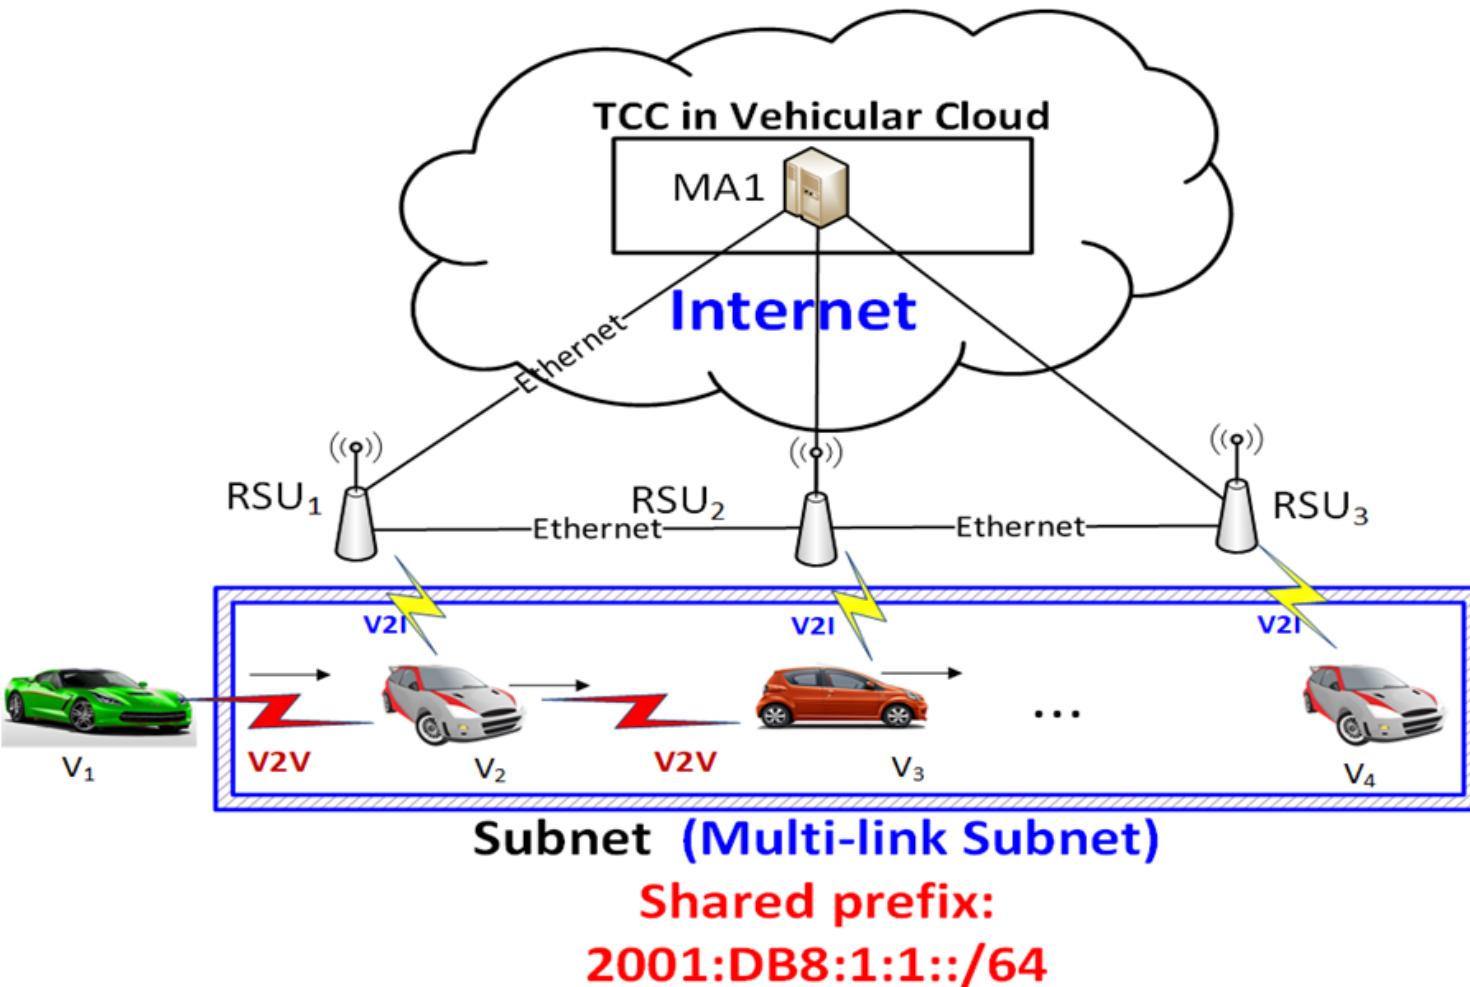

- Proof of Concept (POC) of IPv6-Based Context-Aware Navigator Protocol
- IPv6 mobility information sharing for safe driving in roadways
- Coordinated path planning for obstacle and collision avoidance in roadways
- Efficient driving information exchange in IP-based vehicular networks
- Network-based coordinated driving environment sensing and perception
- Vehicular Simulations of IPWAVE with OMNeT++, SUMO, and VEINS

# Vehicular Network for Simulation of CNP

GISC2020

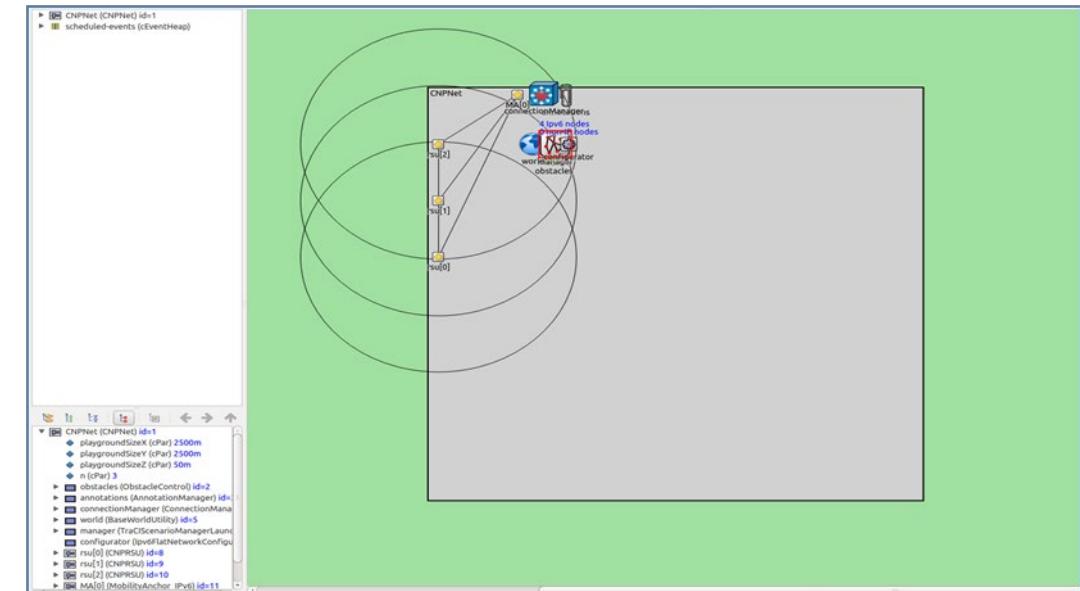

Global ICT Standards Conference

뉴 노멀 시대  
선도를 위한  
ICT 표준의  
역할

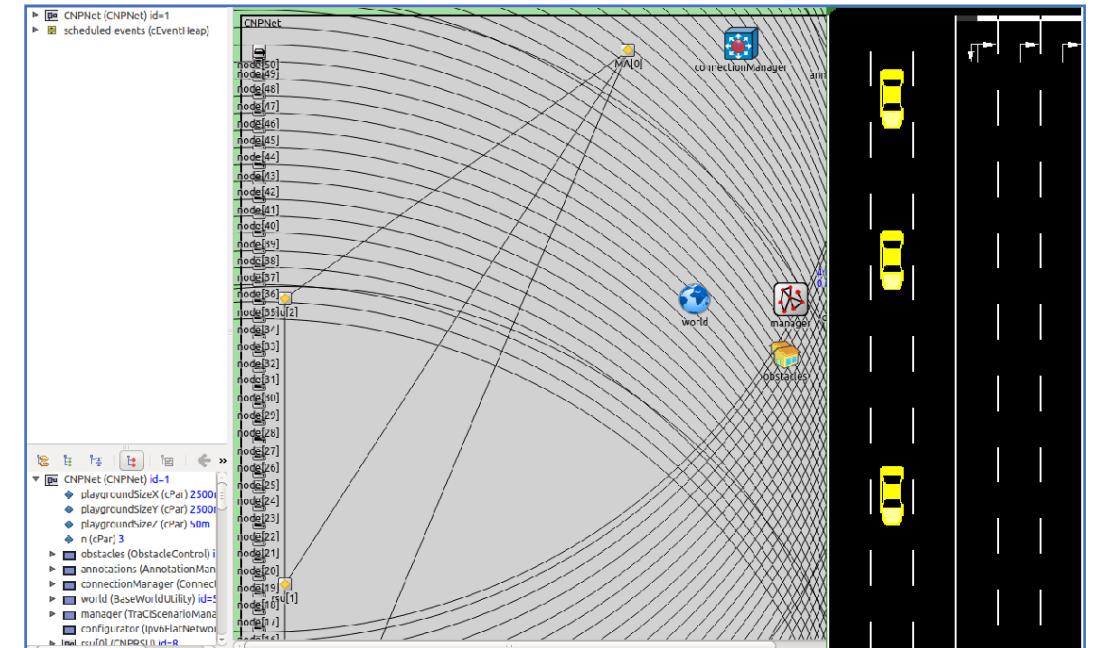

# Simulation of CNP (1/2)

- ✓ Two RSUs:
  - They belong to one subnet.
  - They are connected with each other through Ethernet.
- ✓ Multiple Vehicles:
  - They are driving through a road segment.
- ✓ Mobility Anchor (MA):
  - MA manages RSUs and vehicles for the mobility management of the vehicles.

# Simulation of CNP (2/2)

- We set up an IP-based vehicular network with 3 RSUs and 1 MA.
- Mobility information is exchanged among vehicles by CNP over IPWAVE.
- A coordinated maneuver for collision avoidance is performed by vehicles when an obstacle is detected.
- We implemented CNP, but the types of VMI are not separated yet.
  - This separation will be done in the IETF-109 Hackathon Project.

The screenshot shows the GitHub repository page for the project 'ipwave-hackathon-ietf' under the organization 'ipwave-hackathon-ietf'. The repository name is 'ipwave-hackathon-ietf-108'. The page includes a navigation bar with links to Why GitHub?, Team, Enterprise, Explore, Marketplace, Pricing, a search bar, and options to Sign in or Sign up. Below the header, there are buttons for Watch (0), Star (1), and Fork (1). The main content area features a large 'Join GitHub today' call-to-action with a 'Sign up' button. On the left, there's a sidebar with a 'master' branch dropdown showing 1 branch and 0 tags, and a 'Code' dropdown. The main content area lists four commits by 'mubienaime' from July 24, 2020, with commit IDs 9ecee39 and 2 commits. The commits are: CNPveins (July 24 commit, 2 months ago), IETF 2020 (July 24 commit, 2 months ago), inet (July 24 commit, 2 months ago), and sumo-0.32.0 (July 20 commit, 2 months ago). To the right, sections for 'About', 'Releases', and 'Packages' are visible, each with a 'No description, website, or topics provided.' message.
